DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to a method of amplifying a complex population of mRNA involving generating antisense RNA molecules, classified in class 435 subclass 91.52.
 - II. Claims 18-52, drawn to a method for amplifying a complex population of mRNA molecules involving using a single stranded binding protein, classified in class 435, subclass 91.52.
 - III. Claims 53-58, drawn to a method for synthesis of cDNA molecule comprising using a single-stranded binding protein, classified in class 435, subclass 91.52.
 - IV. Claims 59-65, drawn to a kit comprising a primer, a reverse transcriptase and a single strand binding protein, classified in class 435, subclass 810.

2. The inventions are distinct, each from the other because of the following reasons:

Inventions IV and I-III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the product, invention IV, claims 59-65 are drawn to a kit

Art Unit: 1637

containing a primer, reverse transcriptase and a single stranded binding protein which can be used in nucleic acid purification or protein purification, whereas the process, Inventions I-III can be practiced in a materially different process of using that product.

3. Inventions I-III are distinct because Invention I, claims 1-17 are drawn to a method of amplifying a complex population of mRNA, Invention II, claims 18-52 are drawn to a method of amplifying a complex population of mRNA involving generating cDNA molecules comprising a single-strand binding protein, and Invention III, claims 53-58 are drawn a method of synthesizing cDNA comprising a reverse transcriptase and a single-strand binding protein. They have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, they are different inventions.

4. Because these inventions are distinct for the reasons given above and the search required for each group is different, restriction for examination purposes as indicated is proper.

5. A telephone call was made to Ms. Mary Rose Scozzafava on 7/29/2002 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any

Art Unit: 1637

amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

7. Any inquiries concerning this communication or earlier communications from the examiner should be directed to Joyce Tung whose telephone number is (703) 305-7112. The examiner can normally be reached on Monday-Friday from 8:00 AM-4:30 PM.
